

HEDIS® Accelerator

Transform Your HEDIS Journey: From Manual Abstraction to Closing Care Gaps

The future of HEDIS is digital, and Abacus is leading the way by helping health plans operationalize digital quality measures (dQMs).

Designed for quality leaders focused on year-round performance improvement, Abacus' HEDIS accelerator is a fully managed, FHIR-compliant data solution that accelerates time to action for targeted interventions and member engagement. The solution is built on a usable and insights-ready data foundation which streamlines the path to dQM readiness without costly infrastructure changes. It tackles inefficiencies such as fragmented or inaccurate data at the data source itself, and helps health plans grow performance, while ensuring NCQA compliance while simultaneously preparing for digital HEDIS transformation by 2030.

From Data Ingestion to Year-Round Quality Management

Focus on Improving Member Outcomes: Automated data mapping reduces iterative manual data wrangling and eliminates data complexities that frees internal teams to focus on meaningful quality interventions and member outcomes.

Year-Round Quality Management: Flexible, configurable data modules across regulatory, prospective, and retrospective use cases enable continuous performance monitoring and proactive gap closure throughout the year.

Comprehensive Audit Support: Built-in data validation and lineage tracking supports NCQA audit requirements when needed.

Data Quality Assurance: Built-in data quality reporting and real-time alerts identify and flag inaccuracies early, enabling issue correction before data submission to a HEDIS vendor, reducing churn and speeding time to insights.

Flexible Deployment Options: HEDIS Accelerator data solution can be deployed in multiple environments, including Abacus-managed or Client.

Reduce Submission Delays: Automated accommodation to vendor file and specification changes reduces rework and avoids submission delays.

Shorten Time from Submission to Analysis: Vendor response data files are organized and distributed into insights-ready HEDIS data marts that reduces time from submission to analysis.

Advanced Capabilities, Exceptional Outcomes

Automated Data Mapping with Customized Business Logic Integration

Streamline outbound data prep with automated mapping from all internal sources to your NCQA certified HEDIS vendor formats. Eliminate manual wrangling and ensure data is standardized, complete with business logic and full data lineage tracking.

Integrated EMR and HIE Data

Seamlessly ingest and map EMR and HIE data to boost gap closure and improve measure rates. Get more timely and complete clinical data into your HEDIS workflows.

Configurable HEDIS Runs

Leverage a powerful extraction engine to define and automate custom HEDIS runs retrospective, prospective, regulatory, and more on demand.

External & Internal Data Integration

Integrate vital reference data from inside and outside your plan to maximize gap closure and remove exclusions from measures.

Convert Vendor Response Files to Insights-Ready Data

Automatically distribute response file data into usable, insights-ready datasets designed to support care gap closure and analytics.

Flexible Data Distribution

Your data is delivered in formats (CSV, Secure APIs, Relational tables etc.) ready for use in your existing BI tools and workflows, APIs, or analytics platforms.

Ready for NCQA Audits

Be prepared with complete source-to-target mappings, transformation tracking, flow diagrams, and test results to support a seamless NCQA audit experience.

Enterprise-Grade Security Standards

We meet and exceed the strictest data security and compliance standards including maintaining both HITRUST certification and SOC 2 compliance.

Get Started Today and Take Your HEDIS Performance to the Next Level.

**For a health plan with 150,000 members, currently spending \$1,500,000 on analytic resources for HEDIS, the plan can realize a savings of ~\$500,000/yr by moving the data mapping and wrangling work to Abacus and shifting the responsibilities of the internal team to higher level strategic analytics and implementation of interventions to improve member outcomes and HEDIS rates. This assumes Abacus HEDIS contract of \$500,000/annually and internal analysts move from spending 100% of their time on data to approximately 25%*
