

CMS Interoperability

Turn interoperability compliance into a competitive advantage.

Building towards CMS-0057-F is difficult: It requires heavy investment into FHIR-ready data and deep operational knowledge of mandated API specifications. For health plans already under financial pressure, compliance seems like a sunk cost with little ROI.

We understand what it takes for plans

to undertake comprehensive CMS-0057 implementations, because we've done it across 35+ commercial plans and government agencies.

We specialize in transforming siloed, disconnected data into usable data assets, to accelerate all aspects of your compliance journey – from HITRUST/SOC2 secured environments

to consent capture and authorization integration for your members/enrollees.

The result? Full compliance with interoperability mandates and a usable, up-to-date data foundation for your long-term business needs.

Key Benefits

Rapidly Achieve Full Compliance

We tackle the most difficult parts of compliance, data management and infrastructure, helping you reach CMS-0057-F compliance regardless of your tech stack or readiness today.

Extend Your Data's Business Value

A reusable data fabric helps you turn claims, member, formulary, and clinical data into assets that generate insights for quality, risk adjustment, total cost of care, and payment integrity..

Build Stronger Provider Relationships

Through seamless, interoperable data exchange and streamlined prior authorization processes, you better align with providers, ultimately supporting better outcomes for members.

Reduce IT Time and Costs

Save money, optimize your internal IT resources and reduce risk through a managed service model.

What Sets Abacus Insights' CMS Interoperability Solution Apart

CMS-0057-F: FULL COVERAGE

Patient Access API

- Data ingestion from any source / format
- FHIR conversion & normalization

Provider Access API

- Identity, consent & authorization management
- Secure HITRUST / SOC 2 infrastructure

Payer-to-Payer API

Prior Authorization (ePA)

- Foundation for future compliance needs

Turnkey CMS compliance as a service with end-to-end management across data integration and conversion, technical implementation, and maintenance.

Data connectors efficiently extract data from any source system, in any format, with the ability to transform and enrich source data as needed to enable multiple use cases.

An enterprise data model facilitates healthcare data topics into Fast Healthcare Interoperability Resources (FHIR) format for seamless interoperability and compliance.

Up to \$3 Million in Savings

A managed service model makes the best use of your in-house talent and leverages our specialized experience and tools. We estimate clients save \$1 million – \$3 million using our service, compared to building interoperability capabilities in-house or leveraging hybrid solutions.

Beyond CMS Interoperability

We can help with your data management needs for quality, risk adjustment, total cost of care, and payment integrity, or simply migrate your existing data onto a more usable platform (that supports both FHIR and non-FHIR use cases). Wherever you are in your journey to making data more interoperable and usable, we can help.
