

HEDIS® Accelerator Data Solution

Gain year-round visibility into HEDIS performance and get ahead of digital quality measures — with data that's always insights-ready.

Health plans face mounting pressure as HEDIS reporting grows more complex and the transition to digital quality measures (dQMs) is getting closer. Quality leaders lack timely, year-round visibility to effectively close gaps in care. IT and data teams spend endless cycles managing fragmented sources, manual mappings, and frequent specification changes. Analytics teams receive data that is difficult to trust and even harder to act on.

Abacus Insights' HEDIS Accelerator solution solves the data problem at the foundation.

The solution eliminates manual file generation and data wrangling at the source -automating data integration and mapping of source data into NCQA-certified vendor specifications, delivering a standardized, analytics-ready, audit-proof data set. Health plans can accelerate performance by transitioning from reactive, just-in-time,

intervention planning to year-round, targeted quality performance management while building toward dQMs without investing in new, costly infrastructure.

As a result, teams manage quality proactively. They access insights sooner, close care gaps faster, reduce operational burden, strengthen HEDIS and Star Ratings performance.

Key Benefits:

Manage quality year-round

Maintain continuous HEDIS measurement across regulatory, prospective, and retrospective runs so teams act on issues sooner.

Focus teams on quality improvement

Shift analysts and quality improvement teams away from data wrangling and toward closing care gaps and improving member outcomes.

Accelerate performance insights

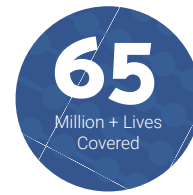

Access analytics ready performance data faster to support timely, targeted interventions.

Avoid submission delays

Adapt automatically to vendor file and specification changes to reduce rework and prevent late or incomplete submissions.

What Sets Abacus Insights' HEDIS® Accelerator Apart

1

FHIR-first and digital-ready

A FHIR-based architecture supports a smooth transition to dQMs without rework.

2

Configurable file extract engine

Run ad hoc, customized file extracts to support evolving regulatory, prospective, and retrospective HEDIS needs throughout the year.

3

Seamless vendor alignment

Map and deliver your data—claims, EHR, labs, and more—into the required format for any NCQA-certified HEDIS vendor.

4

Flexible deployment and integration

Deploy the solution in Abacus's secure cloud or within your own environment, based on your needs and roadmap.

5

Post-processing analytics

Convert vendor output into user-friendly, analytics-ready data that support fast drill-downs into members, providers, and care gaps.

Core Capabilities

- **Flexible data distribution:** Receive processed HEDIS data in formats such as CSVs, secure APIs, or relational tables for immediate use in BI tools and analytics platforms.
- **Enterprise-grade security:** Protect patient data with rigorous security controls, including HITRUST certification and SOC 2 compliance.
- **Built-in data quality assurance:** Validate data at each stage and surface anomalies early so teams address issues before they impact results.
- **Audit readiness for NCQA:** Generate lineage documentation, source-to-target mappings, data flow diagrams, and audit tables to support NCQA audit requirements.
